Average Performance Expectation

Average Observed E2E

- This is the average performance you can expect for orders at these distances.
- We recommend not going beyond 4 miles for an optimal customer experience
- These end to end times exclude your kitchen preparation time (this is measured from your requested collection time, to delivered)

On-demand powered by Stuart's REST API.

On-Demand

A developer-centric approach

- We enable robust, scalable, flexible integrations with our API. The System: a simple architecture and high quality documentation to allow developers to integrate

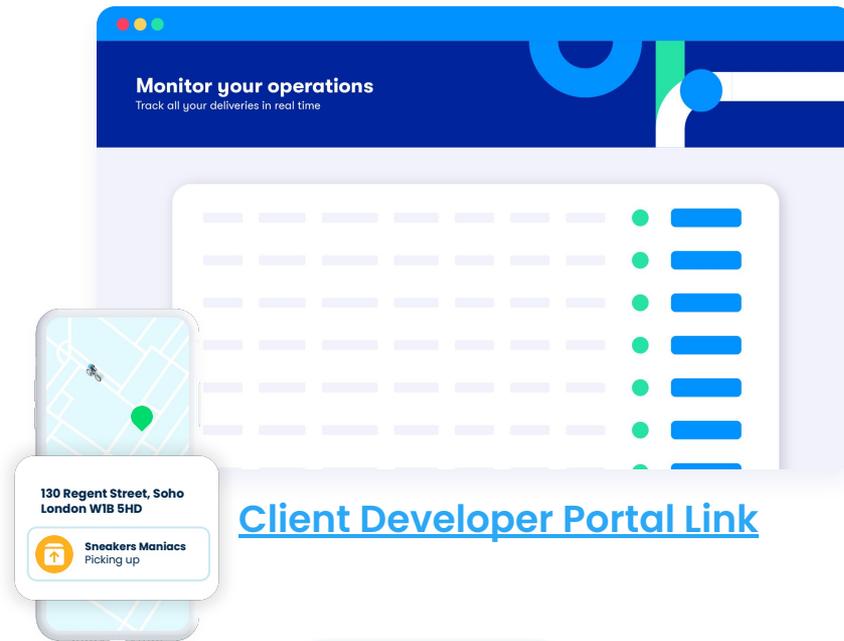

api `api post(`/v2/jobs`, {`

Giving full visibility to the end-customer

- We provide a set of tools powered by realtime driver's position, package's status and ETAs so you can give visibility and control to end-customer over their deliveries : tracking page, webhooks, SMS..

A dedicated team to support you

- Our Customer Solutions Engineering team is fully available to support you with its expertise collected across 200+ integrations:
